

JBB30 Styrofoam Model Board

PRODUCT

Now available from John Burn. JBB30, a lightweight foam ideal for all industries. Large scale models, interior styling models and architectural modelmaking.

- Perfect as low cost lightweight substructure for clay and PU paste models
- 3D modelling making, signage, and prototyping
- Bond JBB30 with **SIKA Foam Adhesive** or **Howstik** for near invisible joint lines
- Superior surface quality when compared to standard blue Styrofoam
- JBB30 is easily machinable unlike most Styrofoam
- Excellent HDT 75°C
- JBB30 is extruded foam which means the board has a closed cell structure
- Pallet and half pallets available for delivery

Over the past 100 years John Burn has continued to develop its expertise in all areas of design innovation and manufacturing processes. We are proud of our reputation as an efficient, reliable and customer friendly company.

Our dedicated approach to providing excellent customer service and a top quality product range has helped us build strong relationships with our customers over the years, many of whom now consider John Burn as a significant business partner.

Working closely with our customers, by providing a comprehensive technical support team, we aim to help them find effective solutions to their many diverse project and material requirements.
