

**SUPER LIGHT.  
SUPER STRONG.  
SUPER FLEXIBLE.**

## The magnificent three from Sika.

### SikaBlock® M80, M160 and M300.

Profit from the outstanding features of our light-weight model boards.

■ **SUPER LIGHT**

The low density of only 0.08, 0.16 or 0.3 kg/t combines an optimum price/performance ratio with simple handling plus faster and easier machining.

■ **SUPER STRONG**

The strength of the three plates is to be found in their fine surface cell structure. It is also reflected by the wide range of available dimensions (blocks in sizes of up to 2 m x 1 m x 0.7 m).

■ **SUPER FLEXIBLE**

Depending on the requirements, you can find just the right choice for the most varied of applications such as styling and design models, mould studies and test milling, substructures for styling clay and model pastes, negative moulds for netsize casting or laminating moulds.
